

Background Images

This example demonstrates full-width background images in headers and footers.

Configuration

```
header:  
  background: header-bg.svg  
  right: Page {page}/{pages}  
footer:  
  background: footer-bg.svg
```

How It Works

Background images are embedded as base64 data URIs and rendered using CSS `background-size: cover`. The header anchors to the bottom edge, the footer to the top edge.

Supported Formats

Any image format works:

- **SVG** - recommended, scales perfectly at any size
- **PNG** - good for complex graphics with transparency
- **JPG** - good for photographic backgrounds
- **WebP** - modern format with good compression

Tips

- Use larger margins to make room for the background graphics
- SVG files scale perfectly at any size

- Text overlays appear on top of the background
