

PDF Metadata

This document has custom PDF metadata embedded.

Viewing Metadata

PDF metadata is visible in:

- PDF viewer “Document Properties” (Ctrl+D in most viewers)
- File managers showing PDF details
- Search indexers and document management systems

Configuration

```
metadata:
  title: "My Document Title"
  author: "Author Name"
  subject: "What this document is about"
  keywords:
    - keyword1
    - keyword2
    - keyword3
```

Available Fields

| Field | Description |
|----------|--|
| title | Document title (auto-detected from first h1 if not set) |
| author | Document author |
| subject | Document subject/description |
| keywords | Array of keywords for search indexing |
| creator | Application that created the document (default: “mdforge”) |
| producer | PDF producer (usually set by pdf-lib) |

Use Cases

Professional Documents

```
metadata:
  title: "Q4 Financial Report"
  author: "Finance Department"
  subject: "Quarterly financial analysis"
  keywords:
    - finance
    - quarterly
    - 2024
```

Technical Documentation

```
metadata:
  title: "API Reference v3.0"
  author: "Engineering Team"
  subject: "REST API documentation"
  keywords:
    - api
    - rest
    - documentation
```

Legal Documents

```
metadata:
  title: "Service Agreement"
  author: "Legal Department"
  subject: "Terms of service agreement"
  keywords:
    - legal
    - agreement
    - terms
```

Automatic Title Detection

If you don't specify a title, mdforge uses the first h1 heading:

```
# This Becomes the Title
```

Content here ...

Results in `title: "This Becomes the Title"` in the PDF metadata.
