Font Presets

This document uses the **classic-elegant** font preset.

Using Presets

Simply specify a preset name:

```
fonts: classic-elegant
```

Available Presets

Preset	Heading	Body	Mono
`modern-professional`	Inter	Inter	Fira Code
`classic-elegant`	Playfair Display	Libre Baskerville	Fira Code
`modern-geometric`	Poppins	Open Sans	Fira Code
`tech-minimal`	Space Grotesk	DM Sans	JetBrains Mono
`editorial`	Cormorant Garamond	Libre Baskerville	Fira Code
`clean-sans`	DM Sans	Inter	Fira Code

Theme presets (`beryl` , `tufte` , `buttondown` , `pandoc`) are also available.

Custom Fonts

Specify individual fonts from Google Fonts:

```
fonts:
  heading: "Playfair Display"
  body: "Source Serif Pro"
  mono: "JetBrains Mono"
```

You can specify just what you need:

```
fonts:
  heading: "Poppins"    # Others use theme defaults
```

Code Example

Here's some code to show the mono font:

```
function greet(name) {
  console.log(`Hello, ${name}!`);
}
```

How It Works

1. Fonts are checked against your system fonts first
2. If not installed, downloaded from Google Fonts
3. Cached in `~/.cache/mdforge/fonts/` for future use

Fonts are set as CSS variables that themes use:

- `--font-heading`
- `--font-body`
- `--font-mono`

Combining with Themes

Fonts work with any theme:

```yaml
theme: tufte
fonts: tech-minimal    # Override tufte's default fonts
```
